

## Proven Solutions. Proven Performance.

Luminary Air Group is a world leader in the design, production and installation of lightweight, modular, mission-tested interiors and insulation systems for military and civilian aircraft.

Since 1998, our STC'd interior products and systems have been flying in aircraft the world over, providing superior cabin comfort, performance and durability no matter what the mission, or where.

## MISSION SPECIFIC AIRCRAFT INTERIOR SYSTEMS

## ALL DAY MISSION INTERIOR®

A lightweight, extremely durable interior system designed for tactical missions and other demanding environments.

## MISSION READY

With more than 20 years of experience working with military and tactical aircraft of all types, we understand the need for a multi-configurable and maintenance friendly aircraft interior system.

That is why we developed the All Day Mission Interior, a high performance system that is both lightweight and extremely durable.

ADMI is low maintenance, delivers superior acoustic and thermal performance, and presents a cleaner look than any other mission interior system flying.

At the heart of the ADMI lies our proprietary mounting system - custom configured to each specific aircraft - which supports the precision engineered components.

No major structural modifications to the airframe are required. Once installed, ADMI's modular design allows quick access to critical maintenance points. GPS, CPU and ISR equipment installed behind periphery becomes easily accessible using hand tools, even while in flight.

Luminary Air Group fully maps each aircraft, ensuring the installation is precisely engineered. If required, our teams are available to install the ADMI package. Both the ADMI and our insulation packages are available with Supplemental Type Certificates (STC).

## MISSION PROVEN

Luminary Air Group's ADMI has been proven in various tactical aircraft, flying mission profiles of all types. The system has been installed in military and civilian tactical aircraft worldwide.

The ADMI holds up in the harshest conditions. US Air Force tactical reconnaissance aircraft outfitted with the ADMI are flying critical missions every day, flying up to three sorties a day.

Air crews appreciate the cleaner mission environment, and because ADMI lowers noise levels and keeps the interior more thermally stable, crews are less fatigued on demanding, multiple missions.

## UNPARALLELED SUPPORT

Our installation specialists and engineering teams are well-versed in the practices and procedures of governmental and contractor facilities, including tool accountability, FOD control, DCMA requirements and other specialized site and project requirements.

Luminary Air Group teams are available globally 24/7 to provide support on existing programs, as well as future programs. Team members all have appropriate security clearances as required.

No matter what you're flying, where or when, Luminary Air Group has you covered.
